## Вариант 8

Найти электрический потенциал внутри сферического слоя при заданных диэлектрической пропицаемости  $\varepsilon=-1$ , условиях на электрический потенциал на границах сферического слоя  $u|_{r=1}=297sin^6(\theta)sin(6\varphi),\,u|_{r=2}=cos^2(\theta)+cos(3\theta),$  если распределение зарядов изменяется по закону  $\rho(r,\varphi,\theta)=rsin^3(\theta)sin(3\varphi).$
